

# Filing Discrepancies and Repair

FCC Discrepancies can cost tens of thousands of dollars when your sites are out of compliance, why not monitor your exposure before they do? We have incorporated our experience with field, engineering, regulatory, GIS, FCC and FAA filings into a product that shows both mapping and graphing of the tolerances. Since regulatory is ongoing, this process is always being updated and can be connected with your site details. Our FAA and FCC filing services are also just a click away for fast clean-up work. Each tolerance is weighted differently with the greatest push toward red, which shows those with the heaviest exposure to fines.

The screenshot displays the SiteSync software interface. On the left, a map shows a site location with various colored overlays representing different regulatory tolerances. A scale bar indicates 10.00 miles. Below the map is a navigation and utility panel with buttons for View, Search, Filings, Upload, and Tools. A search bar is present with the text 'City: law'. In the center, a table lists site details for ID: 841, Site Name: RICHLAND, and coordinates. On the right, a detailed site information window is open, showing 'Exact FCC Match' and 'Exact FAA Match' sections with various technical specifications and matching data.

Group: 3	ID#:
144	648
841	

ID: 841	Site Name: RICHLAND	Lat:	Lon:
Demo Co:	38° 50' 0.0"	95° 29' 53.0"	
FCC:	38° 50' 15.0"	95° 29' 53.0"	
FAA:	38° 50' 15.0"	95° 29' 51.9"	

GE (AMSL)	Struc	(AGL)	Overall Ht. (AGL)
320.00m/1,049.87Ft	274.00m	6.17Ft	594.10m/1,949.95Ft
FCC: 320.00m/1,049.87Ft	274.00m/898.95Ft	274.00m/898.95Ft	594.10m/1,949.95Ft
FAA: 320.10m/1,050.20Ft	N/A	274.00m/898.95Ft	594.10m/1,949.95Ft

Our auto matching to existing and/or nearest structures to your sites allows for discrepancy repairs and shows your internal data matches to FCC and FAA filed information.
