

eCoverage - RF Propagation

- Just need fast simple coverage plots?

Wireless Applications Corp has created full online propagation for the general user. Using high resolution terrain data nationwide and Longley-Rice enhanced frequency calculations, we have taken the intense RF analysis and embedded it into an **easy to use** and very **fast coverage** generator. After the quick analysis of coverage, users can export to popular web-based mapping tools for 3D and aerial views, or click on our SSIR icon for outputting a professional report showing a full layout of coverage, demographics and engineering parameters.

Our eCoverage access is part of the **The SiteSync Platform™**

\$862.00 / yr

Available with the SiteSync Engineering Package.
